

# **PERSONALIZED DASHBOARD**

**The dashboard mainly consists of**

1. **User Identity** – name, role, skill level
2. **Learning Behaviour** – courses watched, time spent, streak
3. **Performance Data** – completion, accuracy, consistency
4. **AI Insights** – recommendations, reminders, smart suggestions

## **1. Smart Welcome and Context Header**

### **Example:**

*“Good morning, Jaswant  
You’re 2 lessons away from completing Python Basics.”*

### **Data Used:**

- Last login time
- Active course
- Daily goal status

## **2. Today’s Mission Card**

- **Beginner** → *“Watch 1 video + 3 practice questions”*
- **Advanced** → *“Solve 2 coding challenges”*

## **3. Study Streak and Focus Analysis**

- *“Best streak so far!”*
- *“You usually study at 8 PM – don’t miss today”*

## 4. My Courses Selection

**Reorder courses based on:**

- Most active
- Most incomplete

**Additional Ideas:**

- Colour - code difficulty (Easy – Green, Medium – Orange, Hard - Red)
- Highlight Resume / Continue

## 5. Performance Message

**Example:**

*“You’re strong in Python basics but need more practice in loops.”*

**AI usage:**

Auto-generate performance summary in English

## 6. Recommendation Systems

**Examples:**

*Asked about Linked Lists → Recommend “DSA – Linked Lists”*

*Struggling in Maths → Suggest practice set*

## 7. Sidebar Personalization

### Example:

*Heavy AI Chat user → AI Chat highlighted*

*Course-focused user → My Courses emphasized*
